CARE GUIDE

Tapware & Fittings

Your new tapware and fittings are built to last, and a little regular care keeps every finish looking its best for years. This guide covers everyday maintenance across all finishes, from polished chrome to brushed brass and matte black.

01

Everyday care

- Wipe surfaces dry with a soft microfibre cloth after use to prevent water spots and mineral build-up.
- Once a week, clean with warm water and a mild, pH-neutral soap, then dry with a soft cloth.
- On brushed finishes, always wipe in the direction of the grain to keep the look even.

02

What to avoid

- No abrasive cloths, scourers or melamine (magic) sponges, they scratch and dull the finish.
- No harsh or acidic cleaners, bleach, ammonia or anti-bacterial sprays, they can strip or discolour.
- Never leave cleaning product sitting on the surface, rinse and dry straight away.

03

Hard-water areas

If you notice limescale, clean weekly with a mild limescale remover made for tapware, then rinse and dry. Avoid strong descalers, which can damage the finish.

04

Coloured & brushed finishes

Brass · Gunmetal · Copper · Nickel · Matte black

These are premium, living finishes. Drying after each use is the single best thing you can do to keep them looking new.

Matte black: use a soft, damp cloth only, then buff dry, nothing abrasive.

A NOTE ON PATINA

Aged and living brass finishes are designed to develop a natural patina over time. This gentle change in character is part of the finish, not a fault.

05

Installation & warranty

- For safety, compliance and to protect your warranty, always use a licensed plumber.
- Keep your proof of purchase for any future warranty claim.

This care guide is general information only. Always follow the care instructions supplied with your product. If you are unsure, please contact OnWood Tiles.
